Computaris

Enterprise Value Added Services

CSP's need to capitalize on the enhanced revenue and margin potential of the enterprise market and focus on rapid and cost efficiently design, delivery and management of next generation value added services by unlocking the potential of existing infrastructure investments.

Leveraging almost two decades of experience in the telecommunication industry, Computaris encompasses end-to-end value added services and application deployments. This expertise empowers CSPs to embrace a pragmatic approach to well-endowed applications and enhance their capability to launch new revenue generating services.

Computaris' Enterprise Services Proposition comprises a suite of basic and advanced Virtual PBX functionalities as well as a complex Virtual Private Network suite.

Computaris Virtual PBX Solution provides seamless interoperability with NGN and legacy networks, allowing CSPs to deliver a rich suite of Centrex and advanced voice services to mobile and fixed enterprise customers.

A full set of PBX functionalities is available to any mobile handset, IP phone, soft phone and legacy device, allowing the subscribers to enjoy ubiquitous services and user experience across all touch points.

Computaris Virtual PBX portfolio controls the behavior of internal, outgoing and incoming calls to all employees and company main numbers. It features private numbering plans for voice, screening/barring schemes based on different criteria, any-to-any calls, call queuing, hunting lists, group numbers, corporate and user defined rules plus other SME apprehended services.

Computaris VPBX Suite benefits

- Growing revenue base by offering a convergent telephony solution
  FMS (Fixed-Mobile Substitution) enabler
- Easy design and deployment of new solutions on the same infrastructure, tailored to suite the latest customer requirements
- Increase business market penetration and customer value
- Smooth transition from legacy to NGN/IMS architectures
- Network independence – Mobile, Fixed, IP
- Seamless integration with CSP's billing, provisioning and existing call control systems, protecting existing investments

Computaris convergent VPN Solution portfolio enables CSPs to offer reliable and flexible tools to enterprise customers that empower them to securely extend the reach of enterprise voice and video traffic applications to remote employees, contractors, partners and customers whilst maintaining productivity.

Virtual Private Network	
Office Zone	Private Number Plan
Outgoing Call Baring	Partner VPN
Incomming Call Screening	Favorite Destination
On Net Calls	International VPN
Private Calls	PBX Integration

Computaris VPN Suite benefits

- Smooth transition from legacy to NGN/IMS architectures
- Reduce OPEX and accelerate ROI
- FMC (Fixed-Mobile Convergence) enabler
- Increase revenue potential and growing enterprise base by complementing existing Centrex/Centrex IP, PBX/IP PBX carrier-managed service offerings

Virtual Private Network	Advanced Virtual PBX
CLIP	Parallel Ringing
CLIR	Sequential Ringing
Call Waiting	Call Toggle
Call Hold	Ring Back when Free
Call Forward	Do Not Disturb
Call Transfer	Call Queuing
	Virtual Switch Board

Consumers Value Added Services

The explosive growth of mobile devices presents tremendous opportunities for CSPs to increase their customer base and value if they are able to launch differentiated services. This can be achieved by implementing new technologies and improving processes efficiency whilst keeping the competitive advantage in a highly demanding market.

Computaris Value Added Services portfolio for the consumer market encompasses a broad range of solutions:

- Online Charging Front-End
- Location Based Services
- Call Completion Services
- Network Services

As real time becomes a mandatory requirement, **Computaris Online Charging Front End solution (OCFE)** provides real time control of service delivery (voice calls, data sessions, SMS, MMS), extending beyond the capabilities of existing infrastructure.

Computaris OCFE Suite benefits

- Extend the charging capabilities without costly investments in legacy charging infrastructure upgrades
- Lower the time-to-market for new services through infrastructure components reuse
- Enable customer base extension deriving from launching higher impact real time services

Computaris location-based services enable CSPs to capitalize on the growing demand for location-enhanced communication to launch enriched, personalized services and consistently proliferate the perceived value of their service offering.

Computaris Location Based Suite benefits

- Increase market share and expand service range for CSPs by accelerating and managing
- Price services more aggressively while preserving existing margins and keeping a market premium for mobility

Computaris Call Completion and Network Services enable CSPs to generate new revenue streams by stimulating the generation of calls and revenues that would have otherwise been lost and by assuring a positive customer experience, providing benefits to both the customer and the CSP.

Computaris Call Completion and Network Services Suite benefits

- Reduce roaming interconnect costs by controlling outbound roaming services and calls
- Increase usage revenue by encouraging call completion

About Computaris

Computaris specializes in system integration, BSS technical consulting and software development, providing the highest level of expertise in BSS: billing, rating and charging, VAS, messaging, provisioning, data services, mediation, service management and mobile payments.
