CASE STUDY

BUILT A WEB-BASED PLATFORM ON AWS

Helped Lendistry **automate** its key **business processes** & **reduce deployment time** by developing a web-based platform using AWS technologies.

www.rsystems.com

Problem Statement

Lendistry, a financial institution, was facing challenges of centrally managing leads & partners, updating reports & applications and adding debt forms in the system.

Business Need

A web-based portal to;

- Update credit reports
- Update loan applications
- Include outstanding business debt forms in the application
- Assign affiliate leads
- Securely execute lending request

Solution Approach

Developed a web-based solution (Lendistry Portal) that facilitated secure & fast execution of lending requests, sales leads and partner management.

Enabled 3rd party integrations with Lendistry Portal:

- Experian – For getting credit score, personal and business profiles
- Data Robot – For calculating the probability of loan defaults
- Plaid – For getting the business and personal bank statements

Benefits

- Automated the business processes
- Reduced deployment times
